AutoCAD Crack Keygen has used the following official product names: Autocad (1982-2000), Autocad 2000 (2000-2003), Autocad 2002 (2003-2005), AutoCAD 2007 (2005-2017), AutoCAD LT (2007-2014), AutoCAD LT 2013 (2013-2016), AutoCAD 2013 (2017-present). AutoCAD version history Version 2.0 (1984) Released on 31 December 1984, AutoCAD 2.0 was the first commercially available computer-aided design software application, with capabilities including geometric models (designs), automatic 2D drafting, layout, and design-based manufacturing. The software's new, graphics-based user interface was intended to be easier to use. It also included the ability to work with type fonts and type sizes, standard AutoLISP programming, built-in help, and scripting. The 1989 version of AutoCAD, AutoCAD 2.1, introduced new commands such as BEVEL, IREVERSE, ALIGN, and LINE. AutoCAD also gained the ability to use imported data from a host data base and the ability to generate and modify reports. Version 2.1 (1989) AutoCAD 2.1 was released on 15 March 1989, providing new tools for assembly design, stamping, and more. The new stamping tool allowed for unlimited instances of a single shape, and part names could be placed on the design layout in multiple colors. The stamping tool also enabled the creation of part profiles, which were to describe a design's unique characteristics. The 1989 version of AutoCAD introduced AutoCAD's file format, called DWG (Design Web Format), and used native 16-bit and 32-bit colors. The new ability to work with native 16-bit and 32-bit colors allowed AutoCAD to work with computer monitors, graphics tablets, and printer software. Version 3.0 (1990) Released in February 1990, AutoCAD 3.0 added more features to the 2D drafting and editing areas, including; section properties, line to section coordinates, and section properties. The new 3D tools added more powerful tools for generating 3D assemblies, including rotary joints and flexible alignment. The new module type and revision functionality, the integrated drawing manager, and data tables for imported files all helped in the preparation of a drawing for print. Version

Business Intelligence (BI) Business Intelligence is a term used by analysts and statisticians who make sense of data. It is used to aggregate, view, filter, report, and analyze information in a way that can be used to make decisions. Business Process Management (BPM) A Business Process Management (BPM) system is a software application that has a workflow as its core. It is intended to help its users manage the workflow in the process of the transaction of company's business. It is often provided as a computerized workflow, which is a Business Process Management (BPM) software based system that is designed to automate some or all of the processes of a business. Examples of a business process are: order processing, human resources, manufacturing, logistics, customer service, supply chain management, and consulting. Business Process Modeling Notation (BPMN) Business Process Model and Notation (BPMN) is an XML-based standard for modeling business processes. It is intended to be used as a way to model business processes. It includes the Business Process Modeling Notation (BPMN) standard (version 1.0), Business Process Model and Notation Expert Group (BPMS) Reference Model (version 1.0), Business Process Model and Notation (BPMS) Standard (version 1.1), Business Process Model and Notation (BPMS) Standard (version 2.0), Business Process Model and Notation (BPMS) User Guide (version 2.0), Business Process Model and Notation (BPMS) Reference User Guide (version 2.0) and Business Process Model and Notation (BPMS) Technical Reference (version 2.0). The latest standard version is BPMN 2.0. A UML-based version of BPMN, BPMN+ UML, is also available. Business Process Framework The Business Process Framework (BPF) is a U.S. Department of Homeland Security (DHS) standard for a business process-driven modeling, design, and control language called Business Process Execution Language for Web Services

(BPEL4WS). It is a framework for defining, designing, developing, implementing and deploying business process applications as business process services. Business Process Reference Implementation A Business Process Reference Implementation (BPRI) is an implementation of a business process modeling language designed to make the development of a business process model and the implementation of business process services much easier.
